Ultimate Permission Manager Demo

Created by Marcziszczky Gábor, last modified 17 minutes ago

Welcome to catworkx Midsummer Day 2018!
Effective User Permissions

User filter
Filter users by username. Use * as a wildcard. Add multiple filters separated by comma. Example: a*,b* will match all users where username is starting with letter "A" or "B"

Space filter
Filter spaces by key or name. Use * as a wildcard. Add multiple filters separated by comma. Example: a*,b* will match all spaces where either space key or name is starting with letter "A" or "B"

Maximum row limit
10
The maximum number of rows to show in the permission table. Enter 0 or leave empty for unlimited results.

- Exclude spaces with no permissions
- Always show anonymous
- Always show anonymous permissions, even if anonymous has no permissions at all.
- Hide users with no permissions in any space
- Hide disabled users

Export Settings
CSV Separator
Comma (,)

Space details format
Space key

- Do not add header title for fix columns (username, permission name...)

Show Export

Help Tips
This page shows effective user permissions overview.

It means group permissions and individual user permissions are evaluated and then the final effective permissions are shown for every user in every space.

Export
In addition to predefined formats, custom space formatting can be set. The following variables can be used for generating space details:
$key, $name, $desc
This is a Velocity template, so using #if condition is possible. In this example, space description in parentheses is added only after space name if space description is not empty:
$name=$if($desc != "") ($desc)#end
THANKS!
